Our Moat

Social-Driven Simulations
(Macro-simulation)

Shows how entire groups or societies react to situations by modeling their interactions and behaviors.

- Focuses on group interactions and societal-level effects
- Agents continuously adapt
- Ideal for policy impact, strategic planning, and understanding systemic risks or opportunities
- Reveals how collective behaviors emerge and evolve
- **Answers**: **How** will the whole group behave and what new trends will emerge?

Persona-Driven Simulations
(Micro-simulation)

Predicts how individual customers will behave by creating detailed digital versions of them.

- Focuses on deep individual user/consumer detail
- Utilizes static traits and behaviors for agents
- Ideal for market research, user experience testing, and understanding individual choices
- Provides insights into why specific individuals might act
- **Answers**: **Why** will a specific person likely act this way?
